I am writing to voice my objections to proposed legislation concerning the future of MOU and compounded medications. I have spent the last two years researching an alternative to standard HRT. I am now in menopause and have decided that natural hormones are the path I want to follow. I have just now received information that I requested from Madison Pharmacy Associates concerning their RESTORE program only to find that legislation may prevent my choice from becoming reality! I am a woman who wants a say in my health and the medications I take. It has been my choice, based on much research, not to take the standard estrogen/progesterone medications normally prescribed by physicians today. I want to protect my rights to have such choices. It is crucial that pharmacies, such as the Madison Group be allowed to continue. It is crucial that women be allowed to make personal health choices that are not dictated by large drug companies!
